BABIES

Introducing  
JollyPop

## The Latest Design from the Inventor of the Most Popular Pacifiers

NOVAPLUS|Sandbox Medical JollyPop™ Pacifiers ([MS3961](#)) are the latest innovation from Sandbox Medical co-founder and CEO Read McCarty, who previously developed the two most widely-used pacifiers in hospitals today: the Soothie® and GumDrop®. JollyPop pacifiers offer a safer, more comfortable solution at the best price available in the market.

JollyPop pacifiers use a unique manufacturing process that combines soft, 100% silicone with a low profile and curved shape that babies love. The improved design and features include:

- + Lowest profile that fits all CPAP nasal cannulas and side lying without the need to cut down the pacifier
- + No hard inner guard, allowing greater flexibility
- + Comfortable, curved shape to better fit baby's face
- + Natural nipple shape babies love – same as hospital baby bottles

Find out why nurses prefer JollyPop. Start your evaluation today by contacting [novaplus@novationco.com](mailto:novaplus@novationco.com) for an evaluation kit, samples and/or cost savings analysis.
